Herti

Business Summary

Herti was founded in 1993 as a start-up company. It is producing various types of closures for bottles. The packaging products are sold to producers of alcoholic and non-alcoholic beverages but part of the closures are designed for the use by the pharmaceutical industry. The company is exporting more than 80% of its production. Main markets are the European Union, Russia and ex-Soviet countries. Herti's business model includes the whole process of production as well as the sell to clients. The company is making market researches in its sector to respond the necessities in different economic sectors.

The company's holding structure includes four subsidiaries:

- Tihert JSC – 100% of the capital;
- Herti UK – 100% of the capital;
- Herti France – 100% of the capital;
- Herti Group International – 49.00%.

The company also owns 5.6% stake in the first Bulgarian packaging recovery organization – the non-profit company Ecopack Bulgaria. Herti is fulfilling its obligations for separate waste collection and recovery of packaging released on the market in Bulgaria according to the current legislation.

Herti is expanding its product portfolio through research and development activities. The company is applying the requirements of the world quality standards and the principles of good corporate management. It was certified under ISO 9001:2008 in December 2009.

Current Market Activity

Herti is among the low liquid shares on the Bulgarian stock market. The initial public offering during the first quarter of 2008 faced many obstacles in terms of limited investors' demand. The ambitious plan to raise capital and to sell existing shares through the stock exchange coincided with the first major decline of international markets. Investors turned toward the low-risk shares of large and well-know companies.

The secondary trading of Herti's shares started with significant lag behind the ongoing process of revaluation of risks on the global markets. This is the reason for the stock to turn lower during its first deals. Investors did not showed interest to the low liquid position in 2009 despite the recovery of the market. However, the trading activity remained at the usual levels during the first quarter of 2010, but April began with huge increase of the price per share and decrease of volumes. We consider this jump to BGN 2 as unsustainable and expect that shares will return to BGN 1.25.

Those are the reasons to consider the fall of the price overdone but we still not see signs of stable upward trend.

Sales

The largest part of the revenues comes from the packaging products for alcoholic beverages. The non-alcoholic beverages segment set up 15% of the total revenues in 2009. Herti is expecting that this segment will shrink further due to the decline of the consumption of soft drinks on the domestic market. According to the Bulgarian Soft Drinks Association, the crisis changed significantly the consumer behavior in the country and the decline will continue during the first half of 2010.

Source: Herti

Retail prices of soft drinks in Bulgaria were flat in 2009 as compared to the previous year. However, the production is declining due to the shrinking personal income, the rising unemployment and the weaker touristic season last year. Herti is estimating faster growth in the segments with relatively small contribution in the total revenues – the pharmaceutical products and the closures for olive oil. Producers of wine are switching from cork to aluminum closures to cut costs that could affect further positively the company’s revenues in the coming quarters.

The growth of revenues during the first quarter was mainly due to the recovery of demand from existing clients. The global economic growth is supporting the consumption of beverages and we expect that Herti will continue to post better quarterly results in terms of sales. 20% of the increase was due to shipments to new clients

The packaging products and solutions of Herti are exported to broad range of markets. The share of sales to Russia is declining due to the growing importance of the EU markets and mainly to neighboring Romania. Herti is expecting to increase substantially its sales to United Kingdom and France through the course of the year after the establishment of subsidiaries in those countries.

Sales to Russia and Bulgaria decreased during the first quarter. Revenues from export to EU jumped 24%, whereas sales to other countries gained 6%.

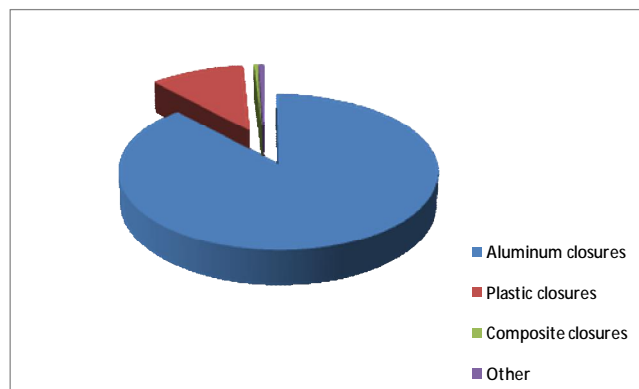

Source: Herti

The results for the first quarter confirmed the expectations that subsidiaries in France and United Kingdom will contribute to the expansion in the both markets. Herti is also entering other new markets in Europe – the company is exporting aluminum closures for wine bottles to Germany as well as to Austria.

The aluminum closures segment remained the largest product segment of Herti with 88% of revenues. However, the stake of aluminum closures declined a bit in the expense of the faster increase of plastic closures, which represented 10% of total at the end of the quarter.

In addition, the export of wine in packages with plastic closures to Russia faced some difficulties in 2009. The continuing decline in export to Russia suggests that the market is shrinking in terms of domestic demand.

Source: Herti

Costs

The price of aluminum has its implication on the revenues and profits of Herti as it is determining the end-user prices as well as the costs for production. Currently, costs for aluminum represent 51% of total costs.

The price of aluminum increased steadily in 2009 and exceeded 2000 dollar per ton on LME at the beginning of the year. The price was hardly changed during the first quarter, but jumped again at the beginning of April. Gains were due to the more optimistic expectations about the global economic growth. The recovery of the metal is exceeding the improvement of the car manufacturers and other industries that are main consumers of aluminum. Lower electricity prices, including in China, are also contributing to the appreciation of the metal.

Certificates For Quality

Herti has started the certification procedure under the BRC/IOP Global Standard for Packaging and Packaging Materials and has been approved. This Standard is a product certification designed to protect consumers' rights and help traders to follow the requirements of the EU for good practices. The certificate provides proof of technical competence and helps producers and retailers reaching full law compliance. It is applied by suppliers in Europe, Africa, the Middle East, Asia, Australia, North and South America. Herti will have the opportunity of free trade with all the companies in the scheme - Tesco, Sainsbury, Marks&Spencer, Asda, Boots, Safeway, Co-op.

Shareholders Structure

Main shareholders of Herti are physical persons. Joseph Mayer is the first long-term investor in the company and is a shareholder from 1997. His trading company Mayer export-import is Austria-based. During the 2008 IPO the existing shares that were offered for sales were from the stake of Mayer export-import. Large shareholders continued to sell small amount of shares during the first quarter of 2010 and the free-float increased to 0.28%. It remains too low to have liquid trading.

As of 31 March 2010

Financial Analysis

The global economic and financial crisis put under severe stress the industrial companies in terms of their revenues and debt servicing. Herti is operating in a niche that also has been affected by the global slowdown. The decline during the crisis had positive effect on several indicators. The company's investments in modernization and capacity expansion have been financed through long-term bank loans. The initial public offering was unable to raise enough capital due to the difficult stock market conjuncture and could not improve the level of debts.

Liquidity	2006	2007	2008	2009	1Q 2010
Current ratio	1.19	0.93	1.03	1.08	1.09
Quick ratio	0.77	0.62	0.73	0.79	0.78

Herti is maintaining a very good liquidity and is ensuring the continuous process of production despite the crisis and the difficult access to bank loans in Bulgaria. The large difference in the two liquidity ratios in 2007 as compared to 2006 was due to the huge investments in machines and the rising debt levels of the company. However, the current and the quick ratios improved since 2007 despite the slight increase of bank loans. The change during the first quarter was insignificant despite the large increase of revenues on yearly basis. Herti's management and the specific area of operations are insuring stable balance between current assets and current liabilities. The improvement of ratios on yearly basis is a result of the gradual decrease of debts.

Debt Management	2006	2007	2008	2009	1Q 2010
Total Liabilities / Total Assets	60.9%	57.7%	60.2%	56.5%	56.7%
LT Debt / (LT Debt + Share Equity)	5.3%	13.7%	21.0%	19.1%	18.4%
LT Debt / Share Equity	7.9%	24.9%	40.2%	35.3%	33.9%
Operating Cash Flow to Total Liabilities	24.2%	-5.3%	4.4%	13.4%	4.5%
Interest Coverage Ratio	1.79	1.43	0.01	0.63	0.84

The rising debt levels in 2007 and 2008 financed the investment program of Herti. The long term debt-to-equity level decreased to 34% in the last non-consolidated report as no new investments had been made. The company did not raise capital in 2009 and paid part of its debts. At the same time, short-term debt is not increasing as clients are able to pay their liabilities in time. Moreover, the increase of assets during the last quarter is reflecting higher revenues and is contributing to the gradual decrease of debt-to-assets ratio. The debt-to-equity ratio of Herti is higher than the average for Bulgarian industrial companies. The level of debts is serious hurdle for the companies with lower profits and plans to invest during the credit crisis. Herti improved its capability to ser-

vice the debt during the first quarter of 2010. EBIT is still below the interest expenses but the difference is shrinking.

The costs of goods sold as percentage of total revenues remained unchanged during the quarter, despite the high prices of aluminum. This trend accelerated in 2008 and 2009 and we can expect that part of the decline could be reversed during the next three years when global economy recovers and prices of materials and energy increase further.

However, the optimization of the production and the large investments in modern equipment during the previous two years will contribute for the below average COGS-to-revenues as compared to 2006-2008. We don't expect to see further decrease of the ratio.

Source: Herti

Aluminum remains the primary material cost for Herti. The metal represented 55% of all costs for basic materials in 2009 but decreased slightly during the first quarter of 2010 to 51%. The change on yearly basis is more significant in the other categories of expenses. The company didn't change the prices of its products during the first quarter as quarterly change in aluminum price was small. Herti is planning to lift prices in May following the volatile prices of resources. However, higher volumes of production improved the profitability and mitigated the inflationary pressure.

Source: Herti

Herti faced an increase of wage and social insurance costs as a percentage of total revenues in 2009. The main reason was the 27% decline of sales last year. Herti's politic to human resources is to avoiding the job cuts. The adjustments of the job number is due to the voluntary went off and retirements. Herti's goal is to maintain its specialists as the company expects that during the periods of rising revenues the labor costs will decrease their significance to 10% of sales. They fell by almost one percentage point during the first quarter.

Prognosis

The declining worldwide consumption of beverages is having negative impact on the revenues of Herti during 2009. This will begin to change in 2010 and Herti is already benefiting from the better conjuncture.

However, the EBITDA margin has not been affected by the rising costs for aluminum last year as they were transferred in the end-user prices. Moreover, the cost cutting measures this year managed to improve the EBITDA margin. The non-consolidated report for 2009 showed EBITDA margin of 8.9% but the ratio improved to 9.3% during the first quarter of 2010. Better revenues and profit margin so far this year will have positive impact on our prognosis for the discounted cash flow.

Valuation

The stocks of Herti are low liquid due to the unsuccessful IPO in the beginning of 2008 when the capital has been increased by only 14 000 shares. The valuation of the stock is based on the comparison by multiples of the companies in the sector of packaging products. We picked only European companies. Despite the economic uncertainties and the lack of comparable historical data of Herti in time of significant crisis, we also use discounted cash flows to calculate intrinsic value of the stock.

Multiples Analysis

The loss of Herti is leading to negative price-to-earnings ratios. The last increase of the price to BGN 2.00 resulted to significantly higher multiples. Price-to-book and price-to-sales ratios were below the average for Bulgarian industrial companies at the beginning of 2010. EV/EBITDA also improved last year but remained relatively higher. However, we expect that EV/EBITDA will gradually improve over time following the rising revenues and the already started decrease of bank loans of Herti. Moreover, the stock price could easily return to BGN 1.2 that will improve all multiples to levels not seen during the last year and half.

Multiples	2008	2009	1Q '10
Price/Earning (P/E)	-41.77	-47.64	-85.00
Equity (BV)	1.01	1.01	1.01
Price/Book Value (P/B)	2.56	1.14	1.98
Sales Per Share	2.36	1.88	2.00
Price/Sales (P/S)	1.09	0.61	1.00
EV (thousand BGN)	41 564	23 906	34 955
EV/Sales	1.47	1.06	1.46
EV/EBITDA	29.63	11.92	16.64

* Estimations and calculations: ELANA Trading
Data for trailing twelve months

Sector Comparison

The production of closures for bottles is only a specialized part of the packaging industry where lots of companies are operating in Europe. Few of them are competitors of Herti but using the average multiples of broader number of companies gives a better valuation. The table is showing the main multiples of companies in Western and Eastern Europe and the average values for all companies. Comparing to the previous valuation, we included large number of European companies in the comparison.

	P/E	P/B	P/S	EV/EBITDA
Eastern Europe	90.00	1.00	0.81	12.76
Western Europe	24.91	1.35	0.58	8.26
Average	50.48	1.27	0.66	9.63

Source: Bloomberg

The markets in Eastern Europe have higher multiples than the average for developed markets. The calculation of the average price-to-earnings ratios excludes the losses during the last 12 months and there is large percentage of companies on the red. This is artificially lowering the value of the indicator as it is representing only the profitable companies. When the sum of all profits and losses are divided by the aggregate market capitalization, the P/E ratio will be much higher. The indicator is the least suitable to value a company during this stage of the economic cycle. EV/EBITDA is also very different for the companies in Western and Eastern Europe. It is due to the worsening profits as well as the growing debts of the companies in Emerging Europe. The average multiples are hardly changed during the quarter. The P/E ratio for Eastern European companies posted the largest increase. EV/EBITDA also increased due to the rising stock prices

Valuation

The both methods have average price per share of BGN 1.43, comparing to BGN 1.14 from our last calculations. This is below the last market price but is higher than the average from the beginning of 2010. The difference between both methods is rising due to the expected growth of revenues.

Method	Price	Weight
Peers' Comparison	1.17	50%
DCF	1.69	50%
Price (BGN)		1.43

Calculations: ELANA Trading

Recommendation And Price Target

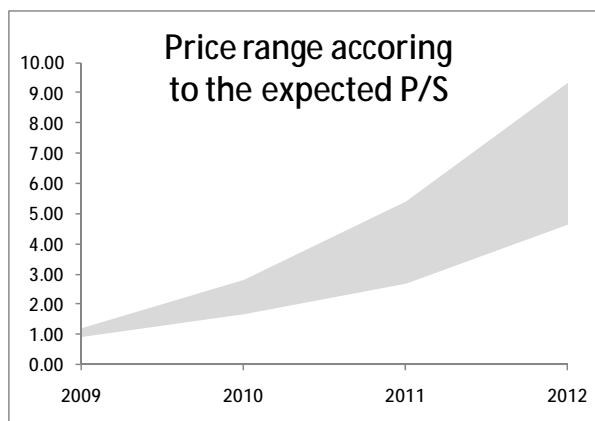

The current valuation has its flaws and some of them were already discussed. The comparison with European peers is based on their financial results that are under the negative influence of the deep economic and financial crisis – revenues and profits are at multi-year lows, whereas investors are requiring higher risk premiums as compared to the previous decade. We can expect that this market bias will gradually change over time. The risk appetite is returning and the valuation ratios are rising since March this year. On the other hand, the discounted cash flows model is very sensitive to the inflation and the nominal turnover of the company.

One alternative to those methods for valuation is the comparison of indicators like P/EBITDA or the price-to-sales to their values during the previous booming years. In 2007 Bulgarian stocks traded at very high multiples - P/S of 4 and P/EBITDA between 8 and 10. The reasons included the elevated expectations for the economy and the low liquidity of the Bulgarian stocks. Small companies posted huge price gains during the final years of the bull market.

The graphs are representing the probable price ranges according to the EBITDA and the revenues in two scenarios. In both cases we can expect higher multiples and renewed risk appetite that could support P/EBITDA and P/S. These price ranges are the possible scenarios if the company is a target for acquisition. The risk aversion is prevailing on the domestic market and P/S ratio of 3-4 looks extremely impossible during the next two years.

Calculations: ELANA Trading

Calculations: ELANA Trading

We give *Market Perform* recommendation of Herti's shares due to the low liquidity and the higher risk of small-caps. Our one-year price target is based on the DCF method and is BGN 1.69. The price target is already reflecting the global recovery but the risk appetite of domestic investors is very low.

The prices or values of the securities may go down as well as up and can fluctuate and fall against the investor. The securities or investments may cause the investor to lose the amount invested. Past performance is not a guide to future performance. Changes in exchange rates may have an adverse effect on the value, price or income of the securities or investments.

Valuation Methods: Company valuations are based on the following methods: multiple-based (P/E, P/B, EV/EBITDA), historical valuation approaches, peer comparisons, discount models (DCF, DDM) or asset-based evaluation methods. Valuation models are dependent on macroeconomic factors, including interest rates, foreign exchange rates, prices of raw materials, and any expectations about the economy, the market sentiment. The valuation is based on expectations that might change rapidly and without notice, depending on developments specific to individual industries and countries. Recommendations and target prices derived from the models might therefore change accordingly. The application of models depends on forecasts of a range of economic variables, thus there is a range of reasonable variations within models. Any valuation is dependent upon inputs that are based on the subjective opinion of the analysts carrying out this valuation.

Recommendations: Analyst(s) recommendations are based on the specific factors for the company, sector, country and global developments, as compared to market indices. Recommendations and opinions reflect ELANA Trading's expectations over the 12-month period following publication from the perspective of long-only investment clients. ELANA Trading reserves the right to express different or contrary recommendations and opinions for different timescales or for other types of investment client. Except as otherwise noted, expected performance over next 12 months vary for different recommendations for Bulgarian stocks as follows:

Outperform More than 5% higher as compared to SOFIX and BG40 performance

Neutral Market performance, +/-5% as compared to SOFIX and BG40

Underperform More than 5% lower as compared to SOFIX and BG40 performance

Frequency of Recommendations: No schedule of recommendations is available. The frequency of recommendations depends on specific factors to individual companies and the opinion of the analyst(s) for the necessity of minor or major changes.
