- Herti produces accessories for bottles and complete packaging solutions for manufacturers of different brands of wine and alcoholic beverages, mineral water and juices, olive oil and medicine. The products of the company are produced with very high quality standards.
- The majority of Herti's revenue comes from sales of bottle caps to spirit drinks manufacturers. The change since the beginning of the year is small and as of present date the segment accounts for 55% of revenues.
- The produce of the company is mainly for export to a wide range of markets. The Bulgarian market accounts for 14% of total sales. During the last two years the share of the local market has increased slightly, but steadily. The biggest international markets are Russia, United Kingdom and France, with European countries increasing in importance.
- The company's forecasts are positive this year, partly due to the establishment of new subsidiary in Germany. Herti plans to place new products on the market for the wine industry at the end of the third quarter, whilst expecting higher revenues from this sector.
- Shares of Herti are traded rarely due to the low free-float. The company's IPO coincided with the financial crisis in Bulgaria and the investor interest to the new position was very limited. The company was planning on using the accumulated resources to pay-off some of its debt and to continue with its investment program.
- The capital of the company is distributed mainly between individuals. Joseph Mayer is the first long-term investor since 1997. The company he manages "IGM Holding" is registered in Austria and is engaged in commercial activities. The main shareholders continued to sell a small amount of their stake and the free-float reached 0.28%. Nevertheless it remained too low for there to be liquid trading even for Bulgarian standards.

Company overview

The main business of Herti is the manufacturing and sale of packaging products, specifically bottle closures. The manufacturing is focused at consumers of different segments of the food industry, but part of the production is targeted at the pharmaceutical sector. Exports account for 85% of sales on average as main revenues are generated from the European Union and Russia.

Herti's business model includes the whole process of production as well as the sell to clients. The company is making market researches in its sector to respond the necessities in different economic sectors.

The company's holding structure includes five subsidiaries:

- Tihert JSC – 100% of the capital;
- Herti UK – 100% of the capital;
- Herti France – 100% of the capital;
- Herti Germany – 100% of the capital;
- Herti Group International – 49.00%.

The company also owns 5.6% stake in the first Bulgarian packaging recovery organization – the non-profit company Ecopack Bulgaria. Herti is fulfilling its obligations for separate waste collection and recovery of packaging released on the market in Bulgaria according to the current legislation. Herti is expanding its product portfolio through research and development activities. The company is applying the requirements of the world quality standards and the principles of good corporate management. It is certified under ISO 9001:2008.

Revenues structure

The largest part of the revenues comes from the bottle closures for alcoholic beverages. The change since the beginning of the year is small and as of present date the segment accounts for 55% of revenues. Aluminum caps for wine are losing their share in sales and now form 21% of the revenues. During the last couple of years wine produces are actively switching to twist caps due to the now highly priced cork. The consumption of wine in Europe is declining, although the importance of aluminum caps will increase.

The decrease in packaging for pharmaceutical products is due to the single exports to Middle East client.

Source: Herti

The first quarter of 2013 had a negative start for the revenues of Herti, which declined 5.6%. This is confirming the downward trend from the end of 2012, but is also a consequence of the strong beginning of the last year. Lower sales of Herti are coincident with the recession in Europe and the consumption of beverages. This is reason for more conservative expectations and forecasts. We are revising on the downside our expectations for revenues and profits.

Source: Herti

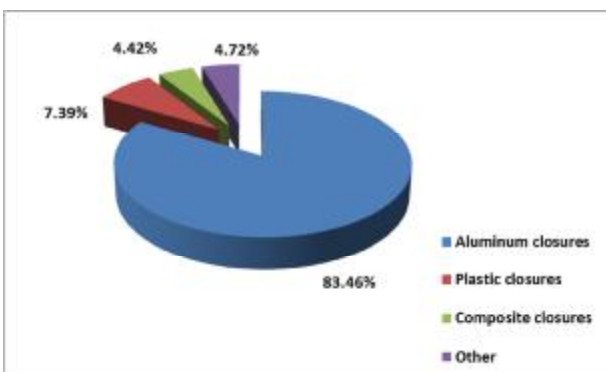

The estimates of the company were positive at the beginning of the year, partly due to the new subsidiary in Germany. At the end of 2012 the firm bought a machine for heat stamping and frontal topography on aluminum caps, which will widen the product range and attract new customers. Orders during the first quarter were lower and the decline came from the markets in Europe.

Source: Herti

The produce of the company is mainly for export to a wide range of markets. The Bulgarian market accounted for 14% of total sales in 2012. During the last two years the share of the domestic market has increased slightly, but steadily. The biggest export markets are Russia, United Kingdom and France, with European countries increasing in importance. The subsidiaries in France and the United Kingdom have a substantial contribution for the presence in these markets. Herti also founded a subsidiary in Germany, which is expected to increase the presence in the country.

Herti is very active in attracting clients by participation in trade fairs. Export to South Africa and the United States targeted the producers of wine. The company is developing the type of composite caps for a client in USA.

Source: Herti

Aluminum closures increased their share in total revenues during the first quarter of 2013 and took significantly larger part as compared to the average during the last year. This change is at the expense of composite closures that lost share to 4.7% of total sales. However, their importance in

revenues this year will be higher as they are expected to be the main generators of growth.

Consumption of alcoholic beverages

The consumption in Europe is declining during the last five years. This trend is concerning wine the most, whereas the consumption of spirits is oscillating near the average level for the last ten years. The change in the regional structure of demand is also visible – Northern Europe is consuming more, whereas the South is slowly changing toward lower quantities of wine.

Certificates for quality

Herti has certificate under the BRC/IOP Global Standard for Packaging and Packaging Materials. This Standard is a product certification designed to protect consumers' rights and help traders to follow the requirements of the EU for good practices. It is applied by suppliers in Europe, Africa, the Middle East, Asia, Australia, North and South America. Herti will have the opportunity of free trade with all the companies in the scheme - Tesco, Sainsbury, Marks&Spencer, Asda, Boots, Safeway, Co-op.

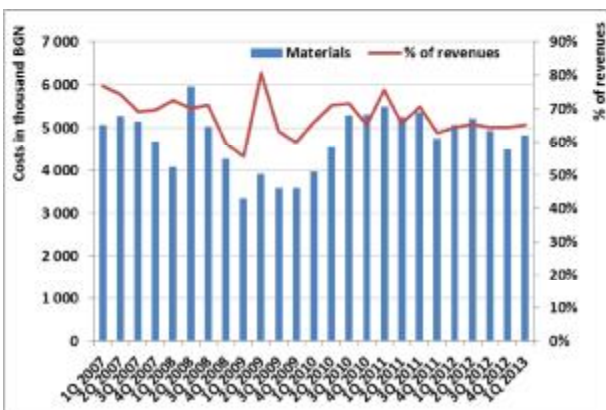

Herti is member of SEDEX – non-profit organization based in London, UK. It is a membership organization for businesses committed to continuous improvement of the ethical performance of their supply chains. SEDEX enables member companies to manage efficiently the ethical and responsible practices of their global supply chains in the field of Labor Standards, Health & Safety, Environment and Business Integrity.

Financial Analysis

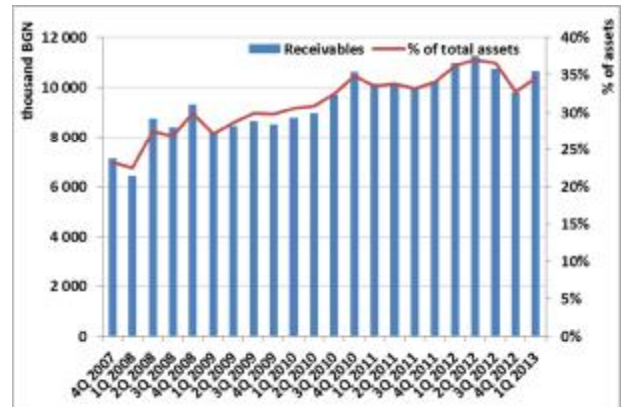

The price of aluminum is the most important factor for the production costs and the profitability of Herti. The metal represents more than half of total expenditures. Aluminum is declining steadily since mid-February and the price fell to its lowest level for the last three years.

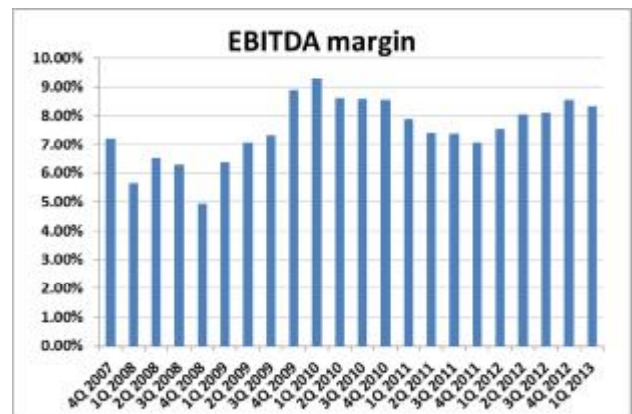

The lower aluminum price will support the profit margin during the second quarter of 2013. The metal is influenced by the overproduction, since the demand is lagging the supply.

Material costs retain their share in the revenue structure and reflect the decrease in revenues during the first quarter. Depreciation costs are declining since the beginning of the year to 4.3% of total revenues. This is the lowest level for the last five years. Inventories have increased above the average level but not to levels that indicate difficulties in sales.

Trade receivables increased after two quarters of declining values both in nominal value and as a percentage to total assets. However, the share to total assets is hardly changed for the previous three years.

The year began with a decline of earnings before interest, taxes, depreciation and amortization. This is followed by the decrease in net profit, although not substantial and the result is near the average for the last five quarters.

The long-term improvement in the recent past is due to the decrease of interest payments. Lower prices of materials and the depreciation influenced the results for 2012 as profit margins increased. However, the first quarter is under the negative effects of appreciating aluminum.

The change in the capital structure of Herti is negligible. The level of other short-term liabilities is again rising, which is a consequence of the forthcoming payments to banks. In fact, the level of bank loans is relatively stable.

Bank loans of the company are around 80% of the equity. The change in the debt structure is small and Herti has no difficulties to service its bank loans.

The quick and current ratios are higher than one, which shows adequate solvency. They are rising steadily during the previous year. The working capital of the company exceeded 1 million BGN and has grown steadily for the last two years reflecting the increase in revenues.

Prognosis

The economic crisis in Europe had a weak effect on Herti's revenues. This is because of the non-cyclical characteristics of the pack-

aging industry and the growing presence in new markets. The weak start of the year is due to the weakening demand from European markets. The company expects higher revenues in 2013 due to the establishment of the subsidiary Herti Germany and the launch of new products on the market. In the model we take this growth rate in to account followed by steady increase of revenues for the following years.

The investments of the company for this year will exceed 4 million BGN, which include the implementation of the two funding projects from the previous year. These are an ERP system for 300 000 EUR and the purchase of a varnishing and printing machine for 1 200 000 EUR. The software will enable faster and more reliable information for making decisions and the varnishing and printing machine will enhance quality and reduce energy. Furthermore during 2013 there are plans for investments of 500 000 EUR for a new production line of aluminum caps with PVC gaskets, 50 000 EUR for constructing a new storage facility and 100 000 EUR for machines that apply finishing works in composite caps.

Source: Herti
Calculations: ELANA Trading

Financial results of Herti weakened during the first quarter, albeit in small degree. Multiples increased as the trading with Herti's shares was mediocre but the value of the company did not change substantially and the stock continued to trade at higher than the market averages. EV/EBITDA ratio posted a decline due to the change in the representation of bank loans in the balance sheet. This is a temporarily effect in the valuation as similarities have been noticed a year ago. The decrease of EBITDA for the trailing twelve months is in fact resulting to EV/EBITDA above 11. We expect that the data to return in the normal after the announcement of earnings for the second quarter.

Comparison to peers

Manufacturing of bottle closures is part of the larger range of packaging products where a lot of companies operate. Very few of them have specialized in the products that Herti provides. A wider range of companies gives a better basis for comparison. That is why we compare the whole sector, taking the averages of the four valuation ratios.

Valuation Methods: Company valuations are based on the following methods: multiple-based (P/E, P/B, EV/EBITDA), historical valuation approaches, peer comparisons, discount models (DCF, DDM) or asset-based evaluation methods. Valuation models are dependent on macroeconomic factors, including interest rates, foreign exchange rates, prices of raw materials, and any expectations about the economy, the market sentiment. The valuation is based on expectations that might change rapidly and without notice, depending on developments specific to individual industries and countries. Recommendations and target prices derived from the models might therefore change accordingly. The application of models depends on forecasts of a range of economic variables, thus there is a range of reasonable variations within models. Any valuation is dependent upon inputs that are based on the subjective opinion of the analysts carrying out this valuation.

Recommendations: Analyst(s) recommendations are based on the specific factors for the company, sector, country and global developments, as compared to market indices. Recommendations and opinions reflect ELANA Trading's expectations over the 12-month period following publication from the perspective of long-only investment clients. ELANA Trading reserves the right to express different or contrary recommendations and opinions for different timescales or for other types of investment client. Except as otherwise noted, expected performance over next 12 months vary for different recommendations for Bulgarian stocks as follows:

BUY	More than 5% higher as compared to SOFIX and BG40 performance
HOLD	Market performance, +/-5% as compared to SOFIX and BG40
SELL	More than 5% lower as compared to SOFIX and BG40 performance

Frequency of Recommendations: No schedule of recommendations is available. The frequency of recommendations depends on specific factors to individual companies and the opinion of the analyst(s) for the necessity of minor or major changes.
