

Stock price of Monbat

- Revenues of Monbat grew 13% during the third quarter on yearly basis. The producer of car batteries had substantially higher growth during the first half of the year, which was due to the lower base of 2012. Since the beginning of the year, sales were 25% higher. Monbat's forecasts for this year were more optimistic and the company expected to gain market share from the troubled producers of batteries in Europe. However, the price of lead did not increase and according to the company, this is the main reason for the miss of expectations.

- Updated forecasts are for 33% growth of sales in 2013 to BGN 269.9 million. Monbat's management is expecting EBITDA to reach BGN 44.78 million, while net profit will increase by 60% to BGN 27.7 million. Expected EPS is BGN 0.71 and P/E is 9.15. The calculations are excluding the treasury shares that at the end of November represented 2.68% of the capital. Monbat recently sold large portion of its treasury shares and ceased the buy-back operations. The company is intending to sell all shares and to use the revenues for investments.

- The net profit during the third quarter soared 33%. The period is not including the sale of treasury shares and the positive financial result of it. Growth rate since the beginning of the year is 44%. Costs for materials represented 70% of total revenues during the third quarter. The average price of lead did not change substantially during the third quarter.

- The accumulated profits of Monbat increased the level of equity. The company is distributing dividends to shareholders and yield varies between 3 and 5%. It distributed 85% of its net profit for 2012 as dividend. Bank loans are rising faster than equity due to the need of working capital. Inventories and trade receivables are following the improvement of revenues, while the company reported a slight decrease of liabilities to suppliers.

- The stock price declined in October as the company sold more than half of its treasury stocks. Investors are cautious before the sale of the rest amount of shares. It is more likely to happen at price levels that are close to the previous deals at BGN 6.40, although the uncertainty of future offering and the possible decline to lower level are limiting the price recovery.

Forecasts: Monbat
Estimations: ELANA Trading

The table is presenting the multiples with the latest trailing results and the forecasts of Monbat for 2013 that are including the strong fourth quarter. The stock price increased substantially this year and offset the improvement of financial results. Multiples are above the average for Bulgarian companies due to the positive expectations of investors.

Comparison to similar companies

Monbat has very good profitability and is growing fast. This is the reason to give higher weight on price-to-earnings and EV/EBITDA multiples as investors' demand will be driven by financial results.

We are using the median of the sector of electrical equipment. Monbat has few peers that produce car batteries but the small number of companies is distorting the comparison. We are excluding stocks with unrealistic multiples, although their impact on median values is negligible.

Source: Bloomberg
Calculations: ELANA Trading

The good profit and the median of P/E ratios of companies in the list are lifting the fair value of Monbat's share to level that is slightly below the current price. It is obvious that Monbat achieves better profits with less invested capital as its holding structure include the capacity to recycle all lead needed for production.

Discounted Cash Flows

The model of discounted cash flows includes future growth opportunities. It is based on the company's forecasts for 2013 and 2014 and profitability ratios that are near the averages for the past several years.

Table 3, Discounted cash flows

PV of Equity	608 934										
Number of Shares	37 954										
Price Per share	16.04										

Estimations: ELANA Trading

We are using 17.5% EBITDA margin for the calculation. This is close the average for the last six years and corresponds to the forecasts for the next year. The profitability and sales growth of the company will depend on the price of lead. Its increase during economic improvement will lift also the profit margin from recycling. Revenues in the model are growing by 25 in 2013 and 2014, followed by gradual decrease to long-term rate of 3.5%. The model includes difference between investments and depreciation only for the next two years. Any large investments will result to higher revenues that we are not including under consideration.

The fair price calculated at WACC of 10% is BGN 16.04 per share. This is substantially higher than the current price but it corresponds to the high profitability.

Recommendation and price target

Recommendation:
BUY
Target price:
BGN 9.50

The model of discounted cash flows is resulting to substantially higher intrinsic value as compared to multiples of the sector. This is mainly due to Monbat's profitability. Our price target for the next 12 months is BGN 9.50, which corresponds to P/E ratio of 10 with the profit for the next year, according to the company's management. The main hurdle before the stock is the sale of treasury shares. The price will jump after the sale and will easily return to its peak.

Risks for Investors: Information in this document should not be regarded as an offer to buy or sell any financial instruments. The investment possibilities discussed in this document may not be suitable for certain investors depending on their specific investment objectives and time horizon or in the context of their overall financial situation. In particular, the risks associated with an investment in the securities or the financial instruments under discussion are not explained in its entirety. The prices or values of the securities may go down as well as up and can fluctuate and fall against the investor. The securities or investments may cause the investor to lose the amount invested. Past performance is not a guide to future performance. Changes in exchange rates may have an adverse effect on the value, price or income of the securities or investments.

Valuation Methods: Company valuations are based on the following methods: multiple-based (P/E, P/B, EV/EBITDA), historical valuation approaches, peer comparisons, discount models (DCF, DDM) or asset-based evaluation methods. Valuation models are dependent on macroeconomic factors, including interest rates, foreign exchange rates, prices of raw materials, and any expectations about the economy, the market sentiment. The valuation is based on expectations that might change rapidly and without notice, depending on developments specific to individual industries and countries. Recommendations and target prices derived from the models might therefore change accordingly. The application of models depends on forecasts of a range of economic variables, thus there is a range of reasonable variations within models. Any valuation is dependent upon inputs that are based on the subjective opinion of the analysts carrying out this valuation.

Recommendations: Analyst(s) recommendations are based on the specific factors for the company, sector, country and global developments, as compared to market indices. Recommendations and opinions reflect ELANA Trading's expectations over the 12-month period following publication from the perspective of long-only investment clients. ELANA Trading reserves the right to express different or contrary recommendations and opinions for different timescales or for other types of investment client. Except as otherwise noted, expected performance over next 12 months vary for different recommendations for Bulgarian stocks as follows:

Outperform	More than 5% higher as compared to SOFIX and BG40 performance
Market Perform	Market performance, +/-5% as compared to SOFIX and BG40
Underperform	More than 5% lower as compared to SOFIX and BG40 performance

Frequency of Recommendations: No schedule of recommendations is available. The frequency of recommendations depends on specific factors to individual companies and the opinion of the analyst(s) for the necessity of minor or major changes.
