

- Corporate Commercial Bank maintained its leading position by net profit among public listed banks in Bulgaria for consecutive quarter. The profit for the three months ending September 30<sup>th</sup> was 29% higher for the same period of 2009. The bank is the only institution in the sector that is forecasting its financial results. It managed to exceed the estimated figures by 5.8% for the reported nine months of 2010.

- EPS for the quarter was BGN 2.96 and for the last twelve months totaled BGN 12.20. The capital position of the bank continued to improve as only part of the profits has been distributed for dividends this year. The capital adequacy ratio was 13.98% at the end of September and Tier I capital was 12.82%.

- The assets of the bank increased during the quarter but are below the all-time high at the beginning of 2009. Attracted funds increased 13.3% since the beginning of 2010 and deposits of households posted the largest gain of 26%. They represented 39.6% of total attracted funds and were 4 percentage point higher than end-2009. Corporate Commercial Bank has very low number of branches but managed to increase the deposits through successful advertising campaign. Deposits of corporations and credit institutions increased 6% and 8.7%, respectively.

- Retail exposure in loans remained negligible, which is one of the reasons for the excellent quality of the credit portfolio. Only 0.63% of total loans are past due over 90 days. NPLs decreased from 0.96% of total credit at the end of 2009. The bank continued to increase its loan book. The main source of growth came from corporate clients – 12.8% increase since the beginning of 2010. Loans-to-deposits ratio fell to 0.91 from 0.93 at the beginning of 2010. The bank is maintaining its stable strategy of loans' increase according to the credibility of its clients. However, the general trend in the banking system is in faster increase of deposits than loans.

- The interest income improved significantly during the nine months (22% to BGN 57.7 million) and managed to offset the decline of net income from fees and commissions to BGN 8.6 million. Profitability ratios continued to improve and current RoE stands at 25%.

- The stock is not under selling pressure despite the overall market weakness. It is not in index SOFIX due to low liquidity but the position is not a concern for additional decline as it has high dividend yield and very attractive valuation.

**Risks for Investors:** Information in this document should not be regarded as an offer to buy or sell any financial instruments. The investment possibilities discussed in this document may not be suitable for certain investors depending on their specific investment objectives and time horizon or in the context of their overall financial situation. In particular, the risks associated with an investment in the securities or the financial instruments under discussion are not explained in its entirety. The prices or values of the securities may go down as well as up and can fluctuate and fall against the investor. The securities or investments may cause the investor to lose the amount invested. Past performance is not a guide to future performance. Changes in exchange rates may have an adverse effect on the value, price or income of the securities or investments.

**Valuation Methods:** Company valuations are based on the following methods: multiple-based (P/E, P/B, EV/EBITDA), historical valuation approaches, peer comparisons, discount models (DCF, DDM) or asset-based evaluation methods. Valuation models are dependent on macroeconomic factors, including interest rates, foreign exchange rates, prices of raw materials, and any expectations about the economy, the market sentiment. The valuation is based on expectations that might change rapidly and without notice, depending on developments specific to individual industries and countries. Recommendations and target prices derived from the models might therefore change accordingly. The application of models depends on forecasts of a range of economic variables, thus there is a range of reasonable variations within models. Any valuation is dependent upon inputs that are based on the subjective opinion of the analysts carrying out this valuation.

**Recommendations:** Analyst(s) recommendations are based on the specific factors for the company, sector, country and global developments, as compared to market indices. Recommendations and opinions reflect ELANA Trading's expectations over the 12-month period following publication from the perspective of long-only investment clients. ELANA Trading reserves the right to express different or contrary recommendations and opinions for different timescales or for other types of investment client. Except as otherwise noted, expected performance over next 12 months vary for different recommendations for Bulgarian stocks as follows:

---

<b>BUY</b>	More than 5% higher as compared to S OFIX and BG40 performance
<b>HOLD</b>	Market performance, +/-5% as compared to SOFIX and BG40
<b>SELL</b>	More than 5% lower as compared to SOFIX and BG40 performance

---

**Frequency of Recommendations:** No schedule of recommendations is available. The frequency of recommendations depends on specific factors to individual companies and the opinion of the analyst(s) for the necessity of minor or major changes.
