

MONBAT
INDUSTRY: ELECTRICAL EQUIPMENT
BACK TO THOSE SWEET MARGINS

WITH LEAD PRICES BACK TO NORMAL FLUCTUATIONS, MONBAT RETURNS TO HIGHER OPERATING PROFITABILITY WITH EBITDA MARGIN ABOVE 18% FOR TWO CONSECUTIVE QUARTERS. RISING VOLUMES AND POSITIVE LEAD PRICE DEVELOPMENTS TO SUPPORT THE COMPANY'S H2'16 PERFORMANCE WHILE RENEWED INVESTMENTS IN CAPACITY EXPANSION AND NEW TECHNOLOGY TO DRIVE LONG TERM GROWTH

BACK TO NORMAL MARGINS

After taking a hit from abnormal lead fluctuation at the end of 2015, Monbat returned to normal margins in 2016. The Company delivered healthy 18%+ EBITDA margin two consecutive quarters with 18.4% as of June 2016. Consolidated EBITDA for H1'16 is BGN 20.9m, down 2.48% y/y, on 5% y/y decline in average LME prices, 0.9% y/y decline in sales and higher labor costs. Bottom line results are above our estimates while top line underperformed as the LME lost significant ground at the end of Q1 and beginning of Q2'16.

VOLUMES AND INVENTORY STOCKING ON THE RISE AHEAD OF THE HIGH SEASON

Monbat delivered good rise in volumes with 15% increase in the number of batteries sold in H1'16, according to management. The latter pace is expected to keep up in H2 which together with lead prices advancing considerably over July and August makes us at ease with our initial top line forecast for FY 2016. Also, Monbat has been building up inventory to take advantage of the lower lead prices at the start of 2016 and deliver good margins in H2 - the active season for car batteries.

SPEEDING UP CAPACITY AND NEW TECHNOLOGY INVESTMENTS

Nice surprise in Q2 are the higher than expected CAPEX investments. The Company is advancing on its calculated expansion in both starter and stationary batteries capacity in Dobrich and Montana with the first stage to be completed in Sept. 2016. It also initiated a EUR 9m project to expand its recycling capacity by acquiring new tin extraction technology from lead alloys. Tin has been among the biggest commodity gainers in 2016 as mining capacity problems in Asia delivered lower than expected supply. Overall, CAPEX in 2016 is expected at ~BGN 24m, as Monbat's management said at the last shareholders' meeting.

PAYS RECORD DIVIDEND WITH STOCK PRESSURE EASING

With financial investors on board for a 6th consecutive year, Monbat declared record dividend - BGN 10.9m or BGN 0.28 gross DPS, yielding 3.9% at current quotes. Nevertheless, the stock trades at YTD lows as it has been under pressure partially from MSCI's review of Bulgaria in its frontier index. However, local demand improved with pension funds adding positions in the stock, including from majority owner Prista Oil Holding. New ETF on SOFIX to add demand and liquidity on the stock as Monbat is a key component of SOFIX.

VALUATION/RISKS

VALUATION: Monbat's latest profitability results and investment momentum keep us at ease with our BUY recommendation. Higher costs, including on depreciation, however, would keep profitability slightly below our initial 5 year estimates. Thus we revise our margins estimates and accordingly our target price downwards.

RISKS: EU economic slowdown and faster than expected electric car penetration.

MONBAT'S RESULTS REVIEW

Monbat delivered good margins and "preparing-for-the-high-season" consolidated results in H1'16.

Revenue breakdown: The top line slid 0.9% y/y for the first six months of 2016 and 5% y/y in Q2'16 alone partially on lower average lead prices vs the same period last year. H1'15 lead prices were abnormally up in the usually low season, thus building a higher than usual comparison base. Overall, average lead prices in H1'16 are down 5% y/y.

Monbat partially compensated the lead price effect with higher volumes. According to management, the latter are growing at an average pace of 15% y/y for the starter batteries and faster for the stationary ones. With the LME advancing considerably over July - August we expect better top line performance in Q3'16 and especially in Q4'16 despite preliminary data of 11% y/y decline in July sales. The latter is an outlier and is against a stronger than usual July 2015 due to early stocking.

Finally, Monbat started receiving state subsidies on its recycling in Serbia. However, as the latter is still negligent vs. recycling operations in Bulgaria and Romania, the subsidies effect shall be somewhere below 1% of total annual sales - thus not a major factor on the Groups overall results.

Inventory buildup: Over the period Monbat is also building up inventory (up 50% y/y to BGN 80m as of June 2016) to take advantage of a lower cost base due to lower lead prices during March-May. It will use it in the high season in H2'16. This new "make-to-order" inventory strategy should allow Monbat to do well during the second half of 2016 and sustain healthy operating margins in addition to better top line performance. Still, it resulted in negative cash flows in H1 which we expect to see to be partially offset in H2.

Profitability improved: In Q1'16 Monbat returned to normal EBITDA margins after aggressive lead price decline in Q3 and Q4 2015 ate up the Company's efficiency buffers in lead recycling. EBITDA margin improved considerably from only 10% in Q4'15 to 18.9% in Q1'16 and 18.4% in Q2'16. We expect it to average 17.7% in 2016 as rising lead prices should affect costs late in

H2'16 despite the preliminary inventory buildup.

Investment speeding up: We are also positively surprised by the advance in capex investments in H1'16 with BGN 15m of the expected approx. BGN 24m already in the books. The Company is expanding its starter and stationary batteries capacity (approx. 20% in 2016) as well as its recycling capacity by investing in new tin extraction technology from lead alloys. The former shall be completed in H2'16 while the latter in 2017 totaling EUR 9m.

Both shall add to the Company's long term growth with the latter adding additional top line diversity as tin demand outpaced supply considerably in 2016 due to mining problems in Asia. All these make us comfortable with our initial top line estimates. We revise slightly downward our bottom line estimates however as higher depreciation, labor costs and additional debt kick with new investments.

Potential exit: Going forward we do not expect aggressive debt building but rather further focus on efficiency and improved profitability as the Company is heading into its third and final year of its efficiency program. The latter was initiated by its new turnaround management that is on board together with financial investors ADM Capital and EBRD. The latter hold 20% of the Company and as their investment mandate is soon to enter its seventh year we are on the lookout for a potential exit. Higher dividend payouts also support it as Monbat declared record dividend in 2016.

Stock catalyst: Accordingly, we are comfortable with a small downward revision to our fair value of BGN 9.05 per share as the stock has been on demand from local institutional investors in the recent weeks after being under pressure due to MSCI's review of Bulgaria in its frontier markets index. We feel the latter has eased as most frontier investors rebalanced their portfolios and renewed local demand. New ETF on SOFIX could also add to the stocks demand as Monbat is a key component of SOFIX. Any exit initiatives from the current financial investors would also be a catalyst for the share's performance.

Exhibit 2: Margins returned to normal in H1'16 after tough H2'15

MONBAT Overview

COMPANY PROFILE

Monbat is the largest lead-acid battery producer in Bulgaria, focused on the automotive aftermarket. It is fully vertically integrated with two production sites in Bulgaria (2.8 million batteries capacity) and three scrap batteries recycling facilities in Bulgaria, Romania and Serbia (60K tons/annum capacity). It also invests in growth businesses such as LED lighting bulbs.

The company exports 90% of products to 30+ countries with the EU major export destination via a wide distribution network. Leading markets are France, Germany, Spain, and Romania while domestic sales take up 10% of revenues. Sells 2.5 million units a year which yields approx. 5.5% market share in Europe.

FUNDAMENTAL STORY

Monbat has 60 years+ of history in lead acid batteries manufacturing. The latest investments in own recycling facilities act as partial natural hedge to LME price volatility in addition to providing environmental and raw materials availability benefits. Accordingly, the company is able to earn above sector average margins of 16% average EBITDA margin over the last 10 years. With a new three year efficiency improvement program the company aims at increasing average EBITDA margins to 18-20%.

Despite the rising demand on electric vehicles, the current technology for starting batteries is expected to remain without substitution. Lead-acid batteries are most cost efficient for industrial applications and will remain primary back-up choice for telecoms.

Monbat is highly ranked for corporate governance with a balanced stakeholders' policy and among the best managed listed companies in Bulgaria. It is run by an experienced professional turnaround team supported by both majority shareholder - Prista Oil Group, and minority investors - turnaround specialist ADM Capital and the European Bank for Reconstruction and Development.

STRENGTHS & OPPORTUNITIES

- Broad distribution network in most EU countries
- No dependence on large client or particular market
- Highly ranked for corporate governance and financial performance from Bulgarian investors
- Resource availability from recycling of old batteries
- Competitive product prices and very high profit margins as compared to leading companies in the sector
- Innovative technology in production of LED light bulbs in prospective market

SHAREHOLDERS' STRUCTURE

SALES BREAKDOWN IN 2015

Source: Company data

WEAKNESSES & THREATS

- Volatile global lead prices may erode both margins and top line performance as price transfer may not happen as fast as commodity price fluctuations, scrap lead availability may decrease and recycling margins may not offset primary market turbulences

Risks for Investors: Information in this document should not be regarded as an offer to buy or sell any financial instruments. The investment possibilities discussed in this document may not be suitable for certain investors depending on their specific investment objectives and time horizon or in the context of their overall financial situation. In particular, the risks associated with an investment in the securities or the financial instruments under discussion are not explained in its entirety.

The prices or values of the securities may go down as well as up and can fluctuate and fall against the investor. The securities or investments may cause the investor to lose the amount invested. Past performance is not a guide to future performance. Changes in exchange rates may have an adverse effect on the value, price or income of the securities or investments.

Valuation Methods: Company valuations are based on the following methods: multiple-based (P/E, P/B, EV/EBITDA), historical valuation approaches, peer comparisons, discount models (DCF, DDM) or asset-based evaluation methods. Valuation models are dependent on macroeconomic factors, including interest rates, foreign exchange rates, prices of raw materials, and any expectations about the economy, the market sentiment. The valuation is based on expectations that might change rapidly and without notice, depending on developments specific to individual industries and countries. Recommendations and target prices derived from the models might therefore change accordingly. The application of models depends on forecasts of a range of economic variables, thus there is a range of reasonable variations within models. Any valuation is dependent upon inputs that are based on the subjective opinion of the analysts carrying out this valuation.

Recommendations: Analyst(s) recommendations are based on the specific factors for the company, sector, country and global developments, as compared to market indices. Recommendations and opinions reflect ELANA Trading's expectations over the 12-month period following publication from the perspective of long-only investment clients. ELANA Trading reserves the right to express different or contrary recommendations and opinions for different timescales or for other types of investment client. Except as otherwise noted, expected performance over next 12 months vary for different recommendations for Bulgarian stocks as follows:

BUY	Target price is more than 10% above current quotes
HOLD	Target price in +/-10% range of the current quotes
SELL	Target price is more than 10% below the current quotes

Frequency of Recommendations: No schedule of recommendations is available. The frequency of recommendations depends on specific factors to individual companies and the opinion of the analyst(s) for the necessity of minor or major changes.
